Computer Science M.S. graduate skilled in Python, SQL, AWS, machine learning, and full-stack development, with experience building and debugging data-driven applications.

EDUCATION – Florida Polytechnic University, Lakeland, FL

Master of Science in Computer Science | GPA: 3.75

Aug 2025 – May 2026

Bachelor of Science in Computer Science | GPA: 3.43

Aug 2021 – May 2025

EXPERIENCE

Data Analyst Intern | New York Life Insurance Co., Tampa, FL

- Developed SQL-based underwriting models to assess policy risk, reducing application processing time by 20%
- Built interactive Tableau dashboards to visualize exposure trends for executive use
- Built and evaluated ML models in Python to assess applicant risk, troubleshooting data inconsistencies and improving model performance.
- Delivered technical findings in a clear, business-focused narrative to senior underwriters

AI Model Evaluation Engineer | Handshake AI (Remote)

- Developed Docker-based validation pipelines to test code against repository-specific test suites
- Implemented solutions for open-source GitHub repositories by modifying and validating code changes
- Debugged failing test cases and analyzed logs to identify issues in model-created code
- Used Git, GitHub, and command-line workflows for version control, branching, commits, and collaboration

SKILLS

- **Programming Languages:** Python, SQL, Java, JavaScript, C++
- **Databases:** MySQL, PostgreSQL, MongoDB
- **Cloud & Data Tools:** AWS S3, AWS Lambda, Amazon Redshift, Amazon EMR, Tableau, Power BI, Excel
- **AI/ML & Data Science:** Machine Learning, Deep Learning, LLM Evaluation, Model Evaluation, Data Preprocessing, Feature Engineering
- **AI Tools & LLMs:** ChatGPT, Claude, Gemini, Grok, DeepSeek
- **Software & Project Tools:** Git, Jira, Visio, Agile/Scrum, Research Analysis

PROJECTS

Full-Stack Solana Trading Journal (being developed for public release)

- Built a full-stack web application that tracks daily profit/loss, portfolio value, and transaction history across multiple Solana wallets
- Mined live price and market data by scraping public financial dashboards and APIs
- Developed REST API routes using Node.js/TypeScript and connected them to a React frontend
- Designed backend logic to handle real-time transaction data and ensure data consistency between user sessions

AI-Driven PDF Data Extraction for Everglades Financial

- Developed an AI-powered PDF scraper using Google Cloud Document AI for automated parsing and extraction
- Trained and fine-tuned an auto-labeling model to extract key financial fields
- Built and deployed the full pipeline into the client website, reducing manual input and increasing processing speed
- Debugged PDF extraction errors to ensure the model can handle different PDF types

Evaluating LLMs for Design Pattern Recommendation from Software Requirements | Submitted for Publication

- Benchmarked LLMs on 217 software requirement-pattern pairs to evaluate design pattern recommendation accuracy
- Compared models using exact match, top-k accuracy, partial match, recall, and calibration metrics
- Analyzed model behaviors, including over-prediction, source sensitivity, and strict-vs-partial accuracy gaps
